

Amendments to the Specification

Please replace the paragraph on page 14 of the specification, lines 25 to 32, with the following amended paragraph:

"The system further comprises a reservoir 70 ~~(not-shown)~~ which is connected to the outlet of the mixer 24. The reservoir 70 stores a large amount of the mixed gas at approximately 20°C and atmospheric pressure. The purpose of the reservoir 70 is to buffer the downstream components of the system from possible fluctuations in the concentration of methane in the gas from the outlet 24 of the mixer 16."

Please replace the paragraph on page 17 of the specification, lines 11 to 15, with the following amended paragraph:

"The system also includes a heat recovery boiler 50. The gas exiting the secondary outlet 37 of the recuperator 11 enters the heat recovery boiler 50, where it is processed to recover as much of the remaining energy in the gas as possible."
